Additive 5760 NA (Aq. Dispersing Agent)

Introduction:

“Additive 5760NA” is Sodium salt of Acrylic Homo-polymer based dispersing Agent. It keeps the solids dispersed in various conditions providing very stable dispersions. By dispersing the particles they maintain good uniformity. When compared with other dispersing agents these dispersants provide very good storage stability of the solids.

Advantages:

- Effective at wide range of pH and Temperature
- Effective viscosity modifier. It permits high pigment loading maintaining flowable viscosity.

Technical Data:

Appearance	:	Colorless to pale yellow liquid
Nature	:	Acrylic acid homo-polymer
pH	:	6 to 8
Solid Content	:	45 % \pm 2.0
Sp. Gr. @ 25°C	:	1.25
Solubility	:	Readily soluble in Water

NOTE:

In general, significant overdosing may deteriorate the coatings properties (e.g. water resistance) and also generates an economic disadvantage.

DISCLAIMER

This product is manufactured to rigid control Specifications. It is impossible to control the use & application. Individuals receiving the information must exercise their independent judgment in determining its appropriateness for a particular purpose.
